'BASH AND CRASH' WITH RUBBAIR DOOR WARRANTIES

at www.impacttrafficdoors.co.uk

Rubbair again raise the standard, which will make the competition sit up and take notice. Rubbair launches its new

'5-TO-LIFE' product warranty package.

Clients such as supermarkets, processing plants and facilities management companies can now reap the benefits of reliable, trouble free impact traffic doors, designed to cope with extreme conditions. Conventional door design fails to meet the more stringent demands of industry – typical problems include hinge weakness, door material splinters, cracks and chips. Throughout industry facilities managers and contractors recognise the need for a better deal.

With Rubbair precision engineered hinges, there are no springs to break and polyethylene door shells absorb the heaviest impacts.

Rubbair Door has been leading the impact traffic door industry since 1952. The product warranty is underwritten by over 52 years experience, making Rubbair a market leader. This experience has been invaluable, because, with the aid of market feedback, we have designed and produced some of the toughest doors on the market today.

Rubbair is the only door manufacturer to offer standard product warranties of 5 years-to-life, dependant on hinge type. Also, our hinge designs require very little maintenance, which for the user, all equates to a ***very low cost of ownership***. With some door manufacturers the hinge mechanism is the "Achilles Heel" of the door, but with Rubbair our hinge mechanisms are designed to last. Hinge operations of in excess of 2.5 million have been recorded and documented, and are increasing by the day.

This can therefore result in a dramatic reduction of costs, even elimination of all cost of ownership.

To find out more contact Rubbair and let them put the swing back into your impact traffic doors!
